The present sequence encodes a human citron rho/rac-interacting kinase-short kinase polypeptide. The polymucleotide and polypeptide of the invention are useful in preventing, ameliorating, or treating diseases associated with the polypeptide dysfunction. The expression vector or the reagent is useful in the preparation of a medicament for modulating the activity of a human citron rho/rac-interacting kinase-short kinase in a disease, such as obesity or chronic obstructive pulmonary disease. These may also be used for treating obesity/ overweight-associated comorbidities, such as hypertension, diabetes, coronary artery disease, hyperlipidaemia, stroke, gallbladder disease, gout, osteoarthritis, sleep apnea, cancer, thrombolic diseases, polycystic ovarian syndrome, reduced fertility, and depression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         781 TGGCTCCTGAAGTGCTGACTGTGATGAACGGGGATGGAAAAGGCACCTACGGCCTGGACT 840

The invention relates to human kinase PKIN proteins and their corresponding cDNAs. A composition associated with decreased expression of reating a disease or condition associated with decreased expression of PKIN and a composition comprising PKIN antagonist is useful for treating a disease or condition associated with overexpression of PKIN. The disorder include cancer (leukaemia, adenocarcinoma, lymphoma, melanoma, melano
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New polypeptides, useful for diagnosing, treating or preventing disorders of growth and development, cardiovascular and lipid, and diseases such as cancer, comprise human kinase polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CCTCCAGGCTGAATCTGTTCTTCCAGGGGAAACCACCCTTTATGACTCAACAGAGATGT 143

New NOVX polypeptides and nucleic acids, useful for diagnosing, preventing or treating NOVX-associated disorders, e.g. diabetes, obesity, cancer or dyslipidemia, and in chromosome mapping, tissue typing or pharmacogenomics

## Claim 20; Page 100; 586pp; English.

The present invention describes NOVX proteins, where X can be 1 to 55 (e.g. NOV1). Also described: (1) a composition comprising a polypeptide described above and a carrier; (2) a kit comprising a polypeptide described above; (3) an isolated nucleic acid molecule which encodes a NOVX protein of the invention; (4) a vector comprising the nucleic acid molecule described above; (5) a cell comprising the nucleic acid molecule described above; (7) methods for determining the binds to the polypeptide described above; (7) methods for determining the presence or amount of the above polypeptide or nucleic acid molecule in a disease associated with altered levels of expression of the above collypeptide or nucleic acid molecule in a first mammalian subject; (9) a method of identifying an agent that binds to the polypeptide described above; (10) a method for identifying a potential therapeutic agent for use in treating a pathology that is related to an abstrant expression or above; (10) a method for identifying a potential therapeutic agent for a creening for a modulator of activity or of latency or predisposition to a pathology associated with the polypeptide; (11) a method of a pathology associated with the bolypeptide; (12) a method for modulating the activity of the polypeptide described above; (13) methods of treating cor preventing a pathology associated with the above polypeptide. NOVX sequences have antidiabetic, anorectic, antibacterial, virucide, immunomodulator, cytostatic, nootropic, neuroprotective, antiparkinsonian immunian

|--|

```
The invention relates to a novel human protein that shares structural similarity with animal kinases, including serine-threonine kinases, particularly Ottron rho-interacting kinases. The proteins of the invention have nootropic and cytostatic activity. The polynucleotides may have a use in gene therapy. The encoded novel polymeptides are useful for generating antibodies, as reagents in diagnostic assays, for identifying other cellular gene products related to NHP and as reagents in assays for screening for compounds that are useful in the treatment of mental, biological or medical disorders and diseases including cancer. The sequence encodes a novel human kinase of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         11 TCAAATATGGAGCGCGGAATCCTTTGGATGCTGGTGCTGCTGAACCCATTGCCAGCGGG

citron rho/rac-interacting kinase polypeptide. The isolated a number of citron rho/rac-interacting kinase polypeptide. The isolated polynucleotide comprises a 6165 or 8603 base pair sequence, given in the polynucleotide and polynucleotide are useful in preventing, ameliorating, or treating diseases associated with human CRIK dysfunction such as obesity and obseity-associated comorbidities (e.g. hypertension, coronary artery and obseity-associated comorbidities (e.g. hypertension, coronary artery cancer including endometrial, breast, prostate and colon cancer), ancieta, anxiety disorders, prakinson's disease or Alzheimer's disorders, anxiety disorders, Parkinson's disease or Alzheimer's cancerated pain associated with the disorders. These can disorder to treat pain associated with the disorders. The human CRIK polypeptide is also useful in disgnostic assays or in genetic testing. The expression vector or the reagent is useful in preparing a medicament for modulating the activity of a human CRIK in a disease, e.g. obesity, a central nervous system disorder, or chronic obstructive pulmonary cases. The fusion protein is useful for generating antibodies against a central is polypeptide and for use in various assay systems. The modulating are in various assay systems. The column cancer is a column of the case is associated by an expression and disorders or chronic obstructive pulmonary disease. The fusion protein is useful for generating antibodies against a contract of the capture of th

New human citron rho/rac-interacting kinase (CRIK) polypeptide and polynucleotide, useful in preventing, ameliorating or treating diseases associated with human CRIK dysfunction, e.g. obesity, diabetes or

The invention relates to a novel human protein that shares structural similarity with animal kinases, including serine-threonine kinases, particularly Citron rho-interacting kinases. The proteins of the invention have nootropic and cytostatic activity. The polynucleotides may have a use in gene therapy. The encoded novel polypeptides are useful for generating antibodies, as reagents in diagnostic assays, for identifying other cellular gene products related to NHP and as reagents in assays for screening for compounds that are useful in the treatment of mental, biological or medical disorders and diseases including cancer. The sequence encodes a novel human kinase of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      in gene

perinteation. The fundan circuit and preventing, ameliorating, or treating diseases associated with human CRIK dysfunction such as obesity and obsesty-associated comorbidities (e.g. hypertension, coronary artery and obsesty-associated comorbidities (e.g. hypertension, coronary artery cancer including endometrial, breast, prostate and colon cancer; anortery disease, hyperlipidaemia, stroke, gout, osteoarthitis, some types of cancer including endometrial, breast, prostate and colon cancer).

Concerta, carchexta, bulimia, central nervous system disorders (e.g. mood disorders, anxiety disorders, Parkinson's disease, or diabetes. These can also be used to treat pain associated with the disorders. The human CRIK polypeptide is also useful in diagnostic assays or in genetic testing. The expression vector or the reagent is useful in preparing a medicament for modulating the activity of a human CRIK in a disease, e.g. obesity, disease. The fusion protein is useful for generating antibodies against a CRIK polypeptide and for use in various assay systems. The methods are useful in producing and detecting the polymucleotide and polypeptide and in screening for agents that modulate the activity of the human CRIK polypeptide. This polymucleotide sequence represents a DNA sequence encoding a human CRIK protein of the invention
citron rho/rac-interacting kinase polypeptide. The isolated polynucleotide comprises a 6165 or 8603 base pair sequence, given in the specification. The human citron rho/rac-interacting kinase (CRIK)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates human kinases (PKIN) and their corresponding nucleic acid sequences. PKIN and its DNA are useful for diagnosing, cureating and preventing cancer, an immune system disorder (e.g., acquired immune deficiency syndrome (AIDS), Addison's disease, allergy, asthma, atherosclerosis, multiple sclerosis, psoriasis), disorders affecting growth and development (e.g., arteriosclerosis, cirrhosis, hepatitis), cardiovascular disorder (e.g., hypertension, myocardial infarction, Goodpasture's syndrome), and a lipid disorder (e.g., fatty liver, Gaucher's disease, Niemann-Pick's disease, hypercholesterolaemia, hyperlipidaemia, obesity), and for assessing the effects of exogenous compounds. Anti-PKIN antibody is useful in a diagnostic test for a condition or a disease associated with the expression of PKIN in a condition associated with decreased or increased expression of functional PKIN.

The proteome of a tissue or cell type. PKIN DNA is useful in a number of drug screening techniques and to analyse the proteome of a tissue or cell type. PKIN DNA is useful for creating chockin humanised animals or transgenic the proteome of a tissue or cell type. PKIN DNA is useful for creating chockin humanised animals or transgenic the proteome of a tissue or cell type. PKIN DNA is useful for creating chockin humanised animals or transgenic the proteome of a tissue or cell type. PKIN DNA is useful for creating chockin humanised animals or transgenic the proteome of a tissue or cell type. PKIN DNA is useful for creating and in somatic or germline gene therapy. The present sequence is human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated polynucleotide encoding a human citron rho/rac-interacting kinase polypeptide. The isolated polynucleotide comprises a 6165 or 8603 base pair sequence, given in the specification. The human citron rho/rac-interacting kinase (CRIK) polypeptide and polynucleotide are useful in preventing, ameliorating, or treating diseases associated with human CRIK dysfunction such as obesity and obesity-associated comorbidities (e.g. hypertension, coronary artery disease, hyperlipidaemia, stroke, gout, osteoarthritis, some types of cancer including endometrial, breast, prostate and colon cancer), anorexia, cachexia, bulimia, central nervous system disorders (e.g. mood disorders, anxiety disorders, Patkinson's disease or Alzheimer's disease), chronic obstructive pulmonary disease, or diabetes. These can also be used to treat pain associated with the disorders. The human CRIK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                850
polypeptide is also useful in diagnostic assays or in genetic testing. The expression vector or the reagent is useful in preparing a medicament for modulating the activity of a human CRIK in a disease, e.g. obesity, a central nervous system disorder, or chronic obstructive pulmonary disease. The fusion protein is useful for generating antibodies against a CRIK polypeptide and for use in various assay systems. The methods are useful in producing and detecting the polymucleotide and polypeptide and in screening for agents that modulate the activity of the human CRIK polypeptide. This polymucleotide sequence represents a DNA sequence relating to the human CRIK protein of the invention

                                                                                                                                                                                                                                                                                                                                                                                                        ò
```

C NOVX polypeptides and polymucleotides are used to prevent, diagnose or treat a medical condition in human related to the aberrant expression and activity of NOVX polypeptides. For example, NOVX polypeptides and polymucleotides may be used to treat disorders associated with decreased expression or activity of NOVX by supplementing the patient our production or activity of NOVX by supplementing the patient our conformal and panes and preventing their expression. NOVX polymucleotides and complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitete the presence of similar sequences in samples, and so which patients may be in need of restorative therapy. NOVX polypeptides may also be used as antigens in the production of antibodies and in assays to identify mediators in the production of antibodies and in assays to identify may also be used as anti-NOVX polypeptide antibodies, agonists and artagonists may also be used to medulate NOVX polymucleotide expression and activity of NOVX. polypeptides anti-NOVX polypeptide antibodies, agonists and artagonists may also be used diagnostic agents for detecting the presence of NOVX in samples. NOVX polypeptides and polymucleotide may be used in this way to prevent, diagnostic agents for detecting the presence of NOVX in samples. NOVX polypeptides and reat: metabolic disorders, dispersed and reat: metabolic disorders, dispersed and disorders, and the various dyslipidaemias, metabolic disturbances associated with chronic diseases and various cancer. Concervances and disorders and the various dyslipidaemias, metabolic disturbances associated with chronic diseases and various cancer. They may also be used as and reading a mine and activity the metabolic syndrome and concern concerns. The metabolic syndrome and activity of NOVX polypediaes and polymediated with chronic diseases and various cancers. represents DNA encoding a human NOVX protein. 8599999999999999999999999

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to a method for identifying a compound capable of modulating pain or painful disorders. The method comprises seasying the ability of the compound to modulate specific nucleic acid expression or polypeptide activity e.g. potassium channel, or kinase expression/activity. The method and compounds are useful for treating pain or painful disorders e.g. inflammatory pain, chronic pain, eneropathic pain, causalgia, fibromyalgia, cancer pain, migraine/headache associated with pain.
